SUMMARY

IT graduate (Big Data Analytics, Finance minor) with 7 months of risk management experience at PETRONAS, building Power BI dashboards and testing risk and governance systems. Skilled in Python, SQL, and Power BI, with projects in risk scoring, financial distress prediction, and customer analytics. Looking for Data Analyst, Risk Analyst, or Business Analyst roles.

EXPERIENCE

Risk Management Intern | PETRONAS, Kuala Lumpur

May 2025 – Dec 2025

- Built and handed over Power BI dashboards for the Downstream business, including a performance dashboard tracking first, second, and third line assurance (FLA, SLA, TLA), for rollout after my internship.
- Analysed 2,000+ tickets (2024–2025) in Power BI to find the top user issues in 3 risk and governance systems (myAssurance, myRisk, myGovernance), and QA-tested these systems.
- Created internal communications, including posters for new system enhancements and the Risk department's new organisational chart, verifying details and photos with staff across the department.
- Helped run 2 townhalls for the entire Risk group, using lessons from the first to guide the new team through the second.
- Wrote reports and handover documents to keep work running during a department restructuring (Sep 2025).

PROJECTS

Enterprise Risk Monitoring – TNB | Python, SQL, Power BI | *Public data*

- Built a SQL database from 5 years (FY2021–FY2025) of Tenaga Nasional Berhad's public annual and sustainability reports.
- Scored and ranked 25 business risks, mapped each to its controls, and estimated about RM2.1B in expected loss under Base, Stress, and Severe scenarios.
- Presented results in a 5-page risk dashboard and a written management report.

Financial Distress Early-Warning System | Python, XGBoost, SHAP, Streamlit

- Calculated 14 financial ratios from 50 companies' financial statements (2023–2025) to predict financial distress one year ahead.
- Compared 4 models; XGBoost reached ROC-AUC 0.911 and caught 76.7% of distress cases on test data.
- Used SHAP to explain each prediction, and turned results into a 0–100 risk score in a 6-page Streamlit dashboard.

Customer Intelligence Platform | Python, PySpark, scikit-learn, Power BI | *Synthetic data*

- Built a PySpark pipeline that cleaned 99,204 transactions into one customer view for 10,000 customers.
- Segmented customers (RFM, K-Means), predicted lifetime value, and trained churn models (best: Random Forest, ROC-AUC 0.79).
- Flagged 1,221 high-value customers at risk of leaving, worth RM7.44M in sales, with recommended actions in a 5-page dashboard.

Revenue Leakage & Profit Optimisation | Python, scikit-learn

- Found that 19% of 9,994 retail orders lost money, flagged 209 unusual orders worth \$104,728 in losses using Isolation Forest, and recommended a 20% discount cap that would have saved \$135,376.

EDUCATION

Bachelor of Information Technology (Hons) | Universiti Teknologi PETRONAS

May 2023 – Aug 2026

- Major: Big Data Analytics | Minor: Finance | CGPA: 3.39
- Final Year Project – EcoUTP: a Flutter mobile app for donating unused items. Used AI (YOLOv8) to detect items and an XGBoost model to predict CO2 saved per donation (R^2 0.965).
- Database project – Guocera Sdn. Bhd. (team of 3): designed a 38-entity relational database in Oracle SQL, including the ER model, queries, and views.

SKILLS

- Programming:** Python (pandas, PySpark, scikit-learn, XGBoost), SQL (Oracle, SQLite), JavaScript, Java
- Data & BI:** Excel, Power BI (DAX), Streamlit, data cleaning, dashboards, data visualisation
- Risk & Governance:** Three Lines model, risk assessment, control mapping, scenario analysis, QA testing, reporting, internal communications
- Analytics & Finance:** Machine learning, customer segmentation, churn prediction, financial statement and ratio analysis
- Languages:** Malay (native), English (fluent), Japanese (spoken and written)

CERTIFICATIONS

Google Data Analytics Professional Certificate – Coursera (Jan 2025) | Investment Risk Management – Coursera (Dec 2024)

LEADERSHIP & ACTIVITIES

- CEO, EaseWay (Forever 21 PLT)** – Technopreneurship team project. Led the team building an accessible AR navigation app, and built the financial model.
- Secretary I, Roots of Hope (Hari Bersama Komuniti 2.0, UTP)** – High Committee member for a coastal mangrove-planting community project.
